

# ENERGY

## Application: steam turbines

**SUPPLY:** jacking oil pump generator side and turbine side

**CHARACTERISTICS OF THE SYSTEM:**

- Hydrostatic jacking of rotor-turbine / generator during start-up and trip phase
- Oil supply from lubrication unit
- Special pumps with heavy duty seals
- Compact solution thanks to the manifold that integrates different functions and reduces the piping
- Aisi 304 base frame
- Electric motors according to NEMA (National Electrical Manufacturers Association) standards for mechanical and electrical parts
