

METAL FORMING

Application: roll forming lines for automotive

SUPPLY: Power units and cylinders for metal roll forming lines

CHARACTERISTICS OF THE SYSTEM:

- Power units with motor-pump group with servo-proportional valves
- The accumulators guarantee a constant pressure and an extremely precise control PID. The hydraulic axis, controlled in closed loop, can reach faster performances
- Cylinders for high operating pressure (500 bar)
- Power units with motor-pump group with servo-proportional valve and motor-pump for high pressure (500 bar) suitable for the control of the blanking operation
